

Future Plans

Last Updated Tuesday, 07 May 2013

Our company expanded its activity also to power production and sale through P/V Photovoltaic Solar systems.

Our first installation has been erected on the rooftop of our own building in Alimos and is of capacity 99,96KW. We selected the best solar panels manufactured in Germany by Solarwatt and the inverters used are also made in Germany by SMA.

The annual production of this unit is in excess of 160.000 KWh (see actual production data)

We have also applied for another 4 units to be installed in fields, each one of 499KW capacity. These applications are at an early stage, expecting for the preliminary approval from the PPC (Public Power Company)
